

Angelo Lamagna Activity Center Information Sheet

Overview

The Angelo Lamagna Activity Center has been wired with new voice and data cabling. This was done to keep the Town network working to the best of its ability and to keep up with the constant growing world of technology.

The new wiring gives the IT department network reliability, centralized management with a new wiring main distribution facility and fast connectivity when moving into the future. The new wiring is tested and guaranteed for 25 years by SBC. The wiring main distribution facility is populated with voice and data connections with new network equipment for centralized management and faster connectivity.

Highlights

- The addition of a wiring main distribution facility for centralized management
- Added phone and data lines to rooms that previously had no access which gives the ability to add or relocate phones and computers for the future.
- Eliminates telephone cross connection problems.

Interaction with Other Systems

- Interaction with other systems will remain the same but at a much greater reliability.
- The new network equipment will increase manageability from the IT Department.
- The new wiring distribution facility has been located in an area that greatly increases the security of the Town network.
