To whom it concerns,

We are installing an Atlantis 15' x 30' x 52" above ground pool from Namco, located at 8 Pinecrest Dr. Included are 2 different locations that we would like to have it installed, both locations are within 100ft of marsh lands. Due to my backyard having a grade down to the end of the property, both locations will need some excavating to make the location flat for the pool installation. Currently my backyard is fenced in and has a self closing gate. My old pool was an 18' round pool with a deck built on to it. This pool landed right outside of the 100' from marsh rule. Currently the pool has been removed due to it collapsing over the winter last year. The deck from this pool will be used on the new pool in a new location so new support footing will have to be poured in whichever location is chosen for the pool. The excavated dirt that is removed from the ground to level out an area for the pool will be left on my property and used to fix and fill in some areas of the ground that are uneven. Depending on the location of pool installation the electrical outlets for pool equipment may need to be relocated as well. Finally there are 6 tree stumps that need to ground 2" below the ground surface and then filled and smooth over.

ENS: to prevent any runoff and erosion during this work being performed from excavating a flat area for the pool, silt fencing will be installed below the work area for mitigation. The removed soil will stay on property to be used to fill and smooth over areas that need repair.
